Global Forecasting Service

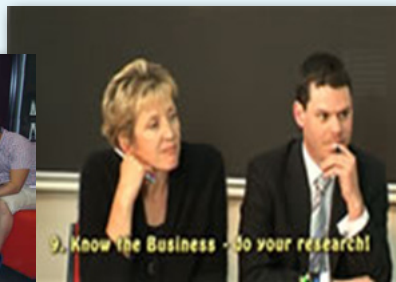

Global Forecasting Service from the Economist Intelligence Unit is the market-leading forecasting tool for the world economy. It predicts and explains the key issues and trends in important developed and emerging markets, spelling out their implications for business and the world economy over the next five years.

You can view analysis and data at the global level, or regional forecasts for North America, Japan, Western Europe, Transition economies, Asia & Australasia (excluding Japan), Latin America or Middle East & Africa. You can download full report, charts or presentations. It also includes a section focusing on commodities, world trade, exchange rates, and global risk forecasts.

10. Group Assessment Interview
11. Graduate Interviews
12. Office Interview - Confidence & Persistence
13. Success at Every Level
14. Pitching Your Business

Kill or Cure series (3 Series in DVD)

This fascinating series investigates the innumerable diseases that blight lives around the globe - and the cutting-edge science that is being developed to combat them. Each programme focuses on a single disease and the attempts to develop treatments that are both effective and affordable to the world's poor, who make up the vast majority of the victims. These are major killers in the developing world, but are mostly ignored in the West either because the diseases don't occur there, or because there are effective, but expensive treatments available to the West's affluent population. Despite this decades-long neglect by modern medical science, this is a documentary series about hope. While millions of lives are lost every year, there are people working on new life-saving treatments.

Series 1 - RC48 .K544 DVD, 8 episodes:
